

Grace to You :: *Unleashing God's Truth, One Verse at a Time*

Ex Nihilo Nihil Fit ("Out of Nothing, Nothing Comes")

Scripture: Genesis 1:1; John 1:3; Colossians 1:16; Hebrews 11:3

Code: B100505

Either there is a God who created the universe and sovereignly rules His creation, or everything was caused by blind chance. The two ideas are mutually exclusive. If God rules, there's no room for chance. Make chance the cause of the universe, and you have effectively done away with God.

As a matter of fact, if chance as a determinative force or a cause exists even in the frailest form, God has been dethroned. The sovereignty of God and chance are inherently incompatible. If chance causes or determines *anything*, God is not truly God.

But again, chance is not a force. Chance cannot make anything happen. Chance is nothing. It simply does not exist. And therefore it has no power to do anything. It cannot be the cause of any effect. It is an imaginary hocus-pocus. It is contrary to every law of science, every principle of logic, and every intuition of sheer common sense. Even the most basic principles of thermodynamics, physics, and biology suggest that chance simply cannot be the determinative force that has brought about the order and interdependence we see in our universe—much less the diversity of life we find on our own planet. Ultimately, chance simply cannot account for the origin of life and intelligence.

One of the oldest principles of rational philosophy is *ex nihilo nihil fit*. Out of nothing, nothing comes. And chance is nothing. Naturalism is rational suicide.

When scientists attribute instrumental power to chance they have left the realm of reason, they have left the domain of science. They have turned to pulling rabbits out of hats. They have turned to fantasy. Insert the idea of chance, and all scientific investigation ultimately becomes chaotic and absurd. That is precisely why evolution does not deserve to be deemed true science; it is nothing more than an irrational religion—the religion of those who want to sin without guilt.

Someone once estimated that the number of random genetic factors involved in the evolution of a tapeworm from an amoeba would be comparable to placing a monkey in a room with a typewriter and allowing him to strike the keys at random until he accidentally produced a perfectly spelled and perfectly punctuated typescript of Hamlet's soliloquy. And the odds of getting all the mutations necessary to evolve a starfish from a one-celled creature are comparable to asking a hundred blind people to make ten random moves each with five Rubik's Cubes, and finding all five cubes perfectly solved at the end of the process. The odds against *all* earth's life forms evolving from a single cell are, in a word, impossible.

Nonetheless, the absurdity of naturalism goes largely unchallenged today in universities and colleges. Turn on the Discovery Channel or pick up an issue of *National Geographic* and you are likely to be exposed to the assumption that chance exists as a force—as if mere chance spontaneously generated everything in the universe.

One Nobel laureate, Harvard professor George Wald, acknowledged the utter absurdity of this.

Pondering the vast array of factors both real and hypothetical that would have to arise spontaneously all at once in order for in-animate matter to evolve into even the most primitive one-celled form of life, he wrote, "One has only to contemplate the magnitude of this task to concede that the spontaneous generation of a living organism is impossible." Then he added, "Yet here we are—as a result, I believe, of spontaneous generation." How did Wald believe this impossibility came about? He answered: "Time is in fact the hero of the plot. The time with which we have to deal is of the order of two billion years. What we regard as impossible on the basis of human experience is meaningless here. Given so much time, the 'impossible' becomes possible, the possible probable, and the probable virtually certain. One has only to wait: time itself performs the miracles." Given enough time, that which is impossible becomes "virtually certain." That is sheer double-talk. And it perfectly illustrates the blind faith that underlies naturalistic religion.

There is no viable explanation of the universe without God. So many immense and intricate wonders could not exist without a Designer. There's only one possible explanation for it all, and that is the creative power of an all-wise God. He created and sustains the universe, and He gives meaning to it. And without Him, there is ultimately no meaning in anything. Without Him, we are left with only the notion that everything emerged from nothing without a cause and without any reason. Without Him, we are stuck with that absurd formula of the evolutionist: Nothing times nobody equals everything.
